

What heavier you are, need you longer trip to stop. In this picture my dog Lotta has to slow her speed enough early to catch the ball.

Heavier one start move later than the slighter one but in this picture the slighter one has stopped before the heavier because when you are heavier you time to stop is longer.

Cars have big weight and what faster you drive that harder is to turn because of the weight. If you drive too fast to curve you can turn out of the road.
